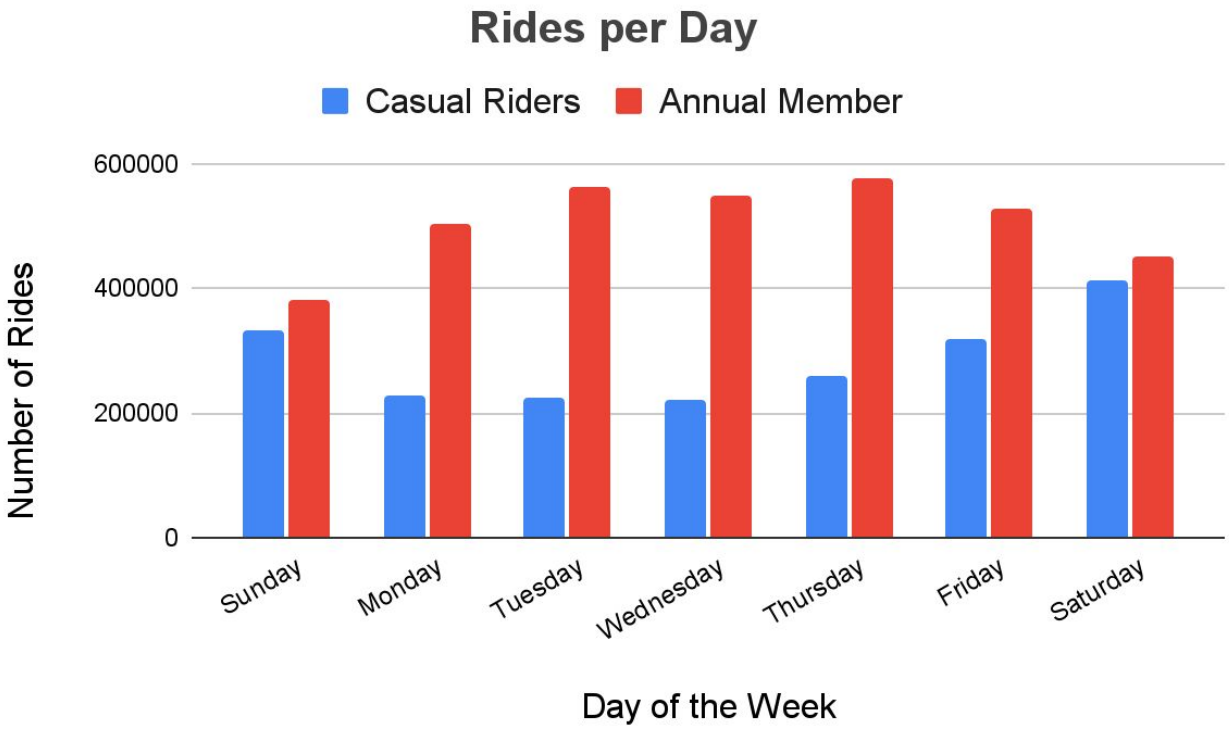
Objective

Identify how annual members and casual riders used Cyclistic bikes differently in 2025

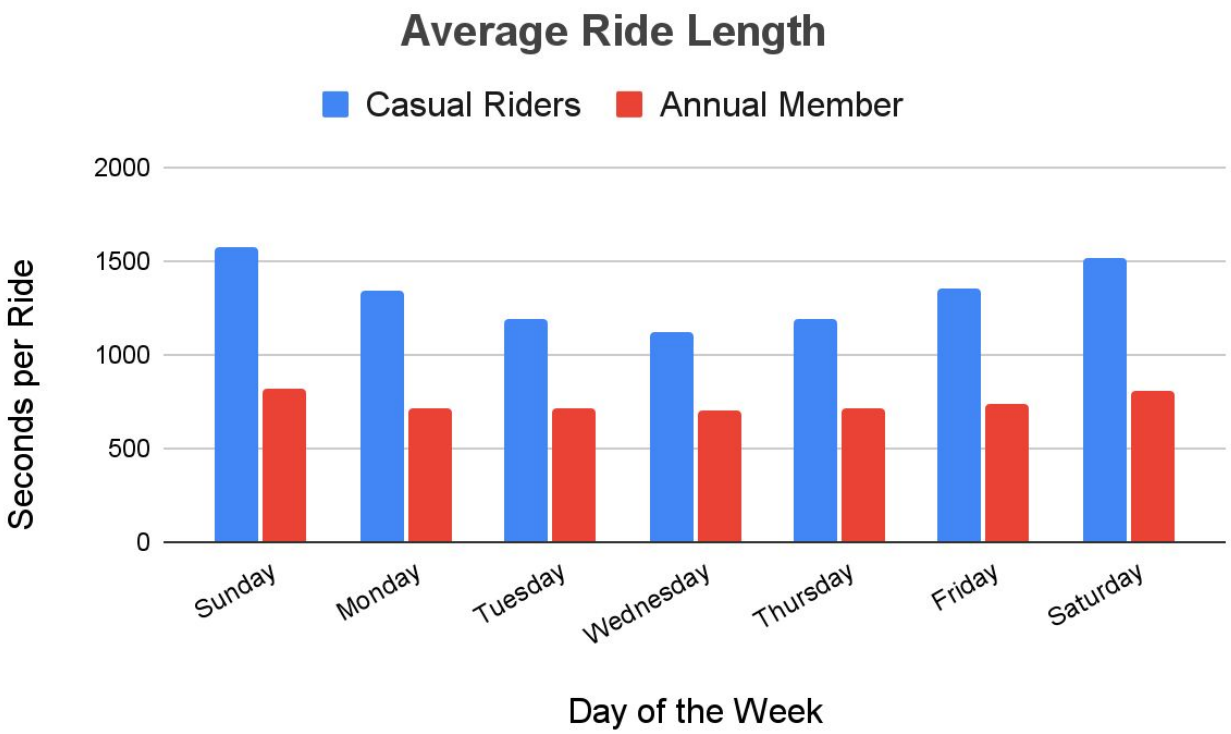
Weekly Rideable Usage

- Casual riders ride most on the weekends (+49% increase vs weekdays)
- Annual members ride most during the weekday (+31% increase vs weekends)
- Annual members likely ride to work
- Casual riders likely ride for leisure



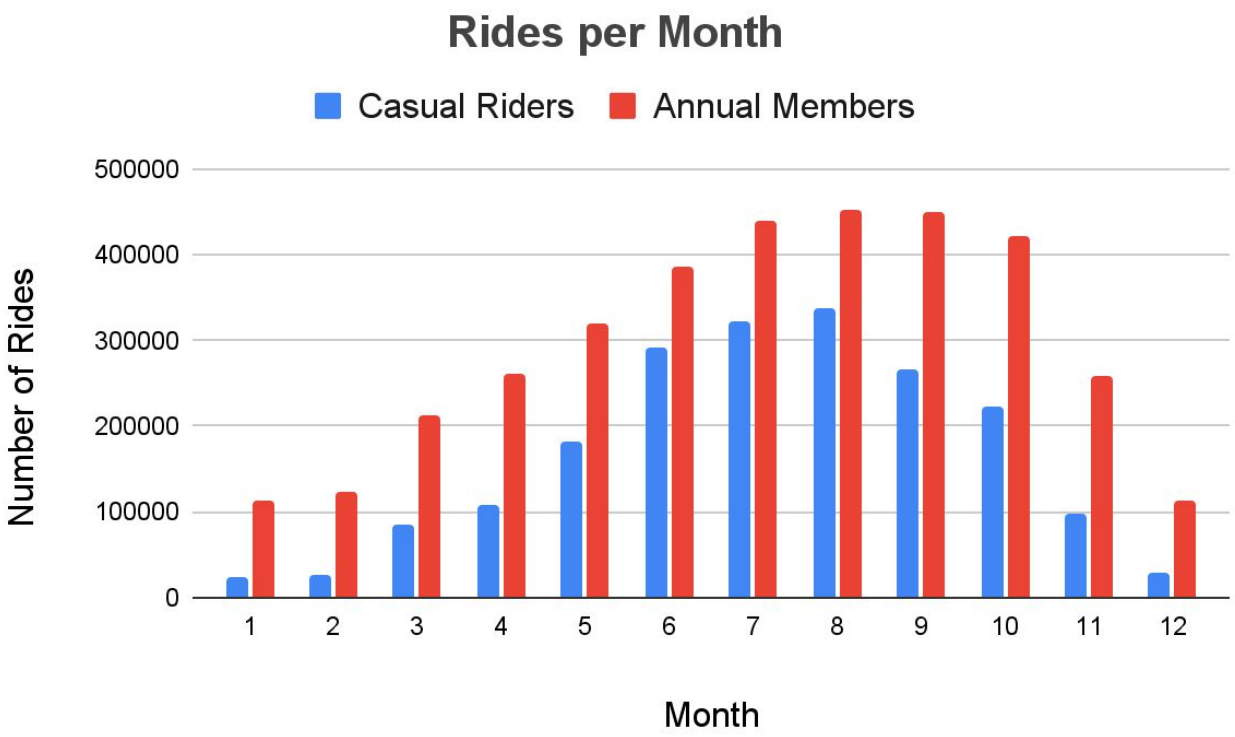
Weekly Average Ride Length

- Casual riders ride longer than annual members
- Average ride length: 1356 sec (casual) vs 740 sec (members)
- The ride length for casual riders increases on the weekend



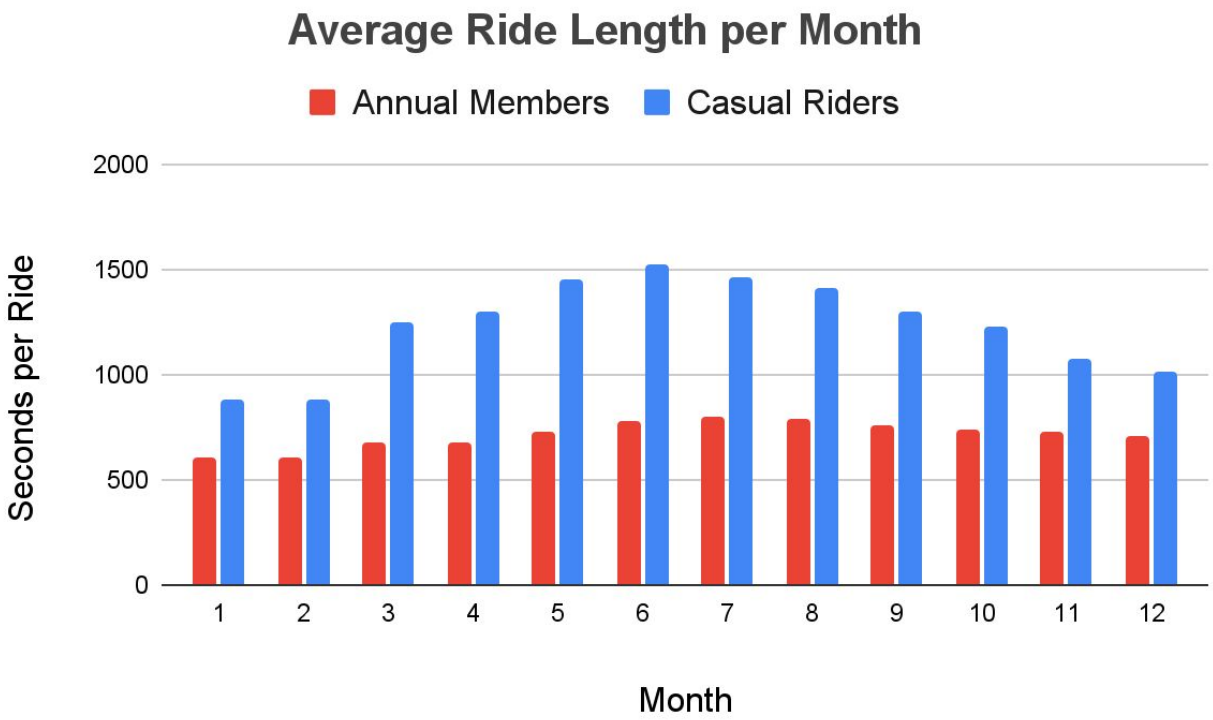
Monthly Rideable Usage

- Casual riders ride more in warmer months
- +368% ride increase in April-October (casual)
- +138% ride increase in April-October (annual)
- Casual riders increase 2.3X more than members in warm months



Monthly Average Ride Length

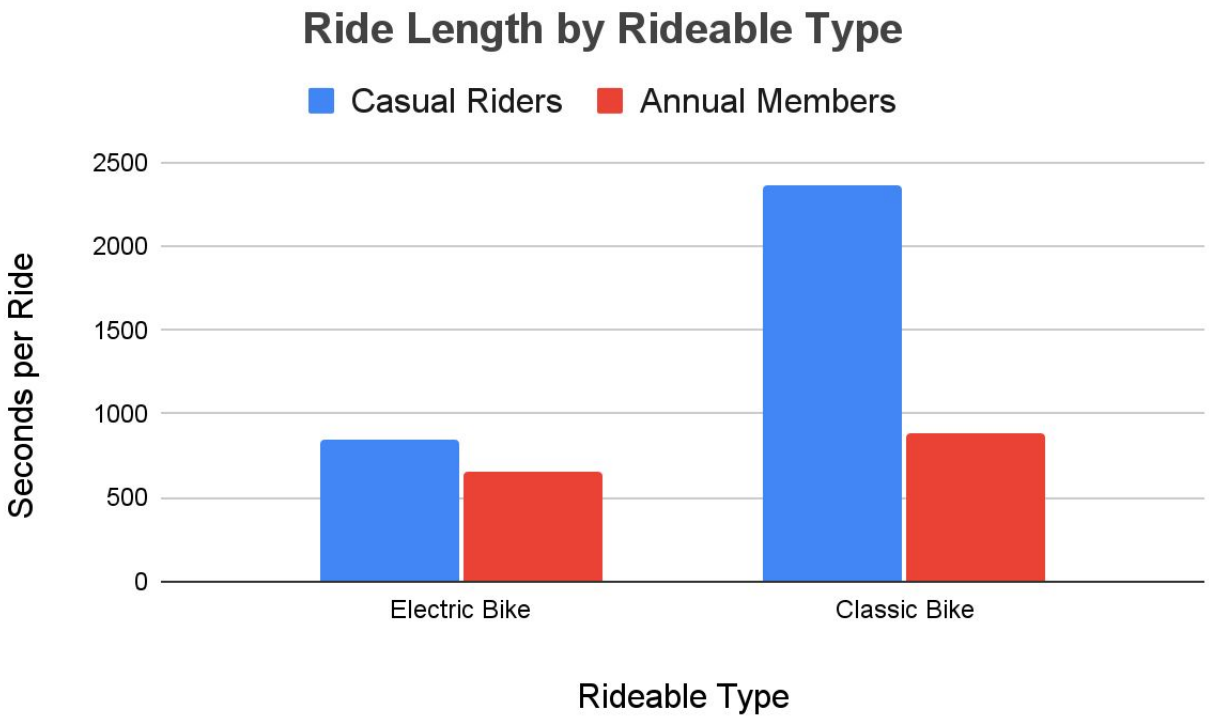
- Casual riders ride much longer in the warmer months
- +36% average ride length April-October (casual)
- Annual members ride only slightly longer in warmer months
- +14% average ride length increase April-October (annual)



Rideable Type

- Casual riders used the classic bike for long rides

- Less than 3% difference between casual riders and annual members in the rideable type chosen



Summary

Key Takeaways

- Casual riders: weekends, long trips, warmer months, leisure
- Annual members: weekdays, shorter trips, commute
- Rideable type: minimal difference in choice (<3%)

Conclusion

1. Casual riders ride the most during the weekend while annual members ride the most on weekdays

2. Casual riders strongly prefer riding in warmer months (April-October)

3. Targeted seasonal and weekend promotions would be a great opportunity to convert casual riders to annual members
